Wall Panel/Suspended Signs/Pictograms - Overview

Wall Panels

Wall Panels consist of an aluminium sheet (or another sheet material with a max 2mm thickness) cut to size with a slim line frame all round with mitered corners. The frame has an internal screw flute which enables the ends to become removable, allowing the sign panels to be changed with minimum fuss. This not only makes the sign practical from a maintenance viewpoint it also also makes it extremely cost effective because you are not replacing the whole sign.

Suspended Signs

The Signlink *Ceiling Suspended* sign system is made up of frames and text panels. The frames can be screwed together to form single or multi plank signs. Text panels are then inserted into both sides of each frame enabling the sign to be read from two sides. Panels can be removed or changed by simply unscrewing the end pieces of the frame and sliding out the required panel.

Pictograms

Pictogram signs come in two styles:

- A flat wall mounted version which is permanently fixed as the text panels are generally not interchangeable; and
- A Projected version which allows for the sign to project out from a door, wall or ceiling.

SUSPENDED SIGNS/WALLPANELS/PICTOGRAMS

Wall Panel Signs

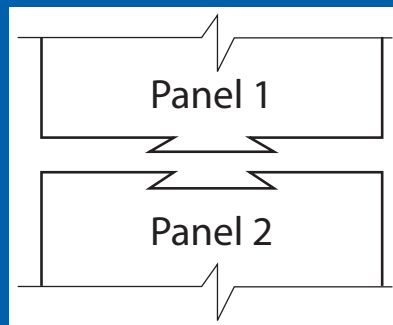

Wall panel signs can be mounted by way of double sided tape or by screw fixing. All fixings are concealed when the text plate is inserted. The front elevation of the wall mounted 200 series matches that of the 300 series ceiling suspended sign and the 400 series pictograms.

Standard sizes are in multiples of 100mm in length and height with a maximum practical plank size of 1200mm long x 300mm high. Custom sizes are also available.

The sign faces or text panels can be made from any sheet material such as Aluminium, Colourbond or Acrylic. The material can have a maximum thickness of 2mm but the most popular choice is a 1.2mm Aluminium which can be satin natural anodised, pre coated white or painted in two pack polyurethane to match any nominated colour.

Ceiling Suspended Signs

The multi plank signs are joined together by a unique interlocking "grooved and T" section and they are internally supported by space tubes. The signs are suspended from the ceiling with a 1.2mm stainless steel wire and the clever use of locking cylinders inside the frame makes leveling the signs easy.

The sign faces or text panels can be made from any sheet material such as Aluminium, Colourbond or Acrylic. The material can have a maximum thickness of 2mm but the most popular choice is a 1.2mm Aluminium which can be satin natural anodised, pre coated white or painted in two pack polyurethane to match any nominated colour.

Pictograms

Wall Mounted pictograms are ideal for toilet doors, floor numbering, fire hoses or anything where a symbol is used instead of text.

Comes in standard sizes of:

Width	Height
150mm	150mm
300mm	150mm
200mm	200mm
400mm	200mm
300mm	300mm

Projected pictograms can be used in the same areas as the wall mounted signs with the added attraction of being able to be seen from two directions. Standard sizes have a projection of up to 500mm in 50mm increments, with a height of up to 300mm in 50mm increments.
